

■ IMPORTANT FOR YOUR BUSINESS

Supplying a consistent flow of pregnancies is fundamental to sustaining herd size, improving milk production and fueling the youngstock program. This advanced training will help you ensure reproductive success and through that success, profitability for any dairy at which you serve.

ABS Global is committed to our customers and the professional development of our industry personnel through investment in quality instructional courses. The RMS Training Program is the logical next step for any person seeking to build their reproductive expertise, maximize pregnancy production and become a Certified RMS Technician.

Upon visiting the training center, Dwight Williams of ABS North America had the following reflections, "Jesus is very professional and dedicated to the implementation of specialized RMS training. Jesus showed that he is not only a competent trainer, but as good trainers are, he was also very open to suggestions from the trainees. The trainee I accompanied had a good deal of experience and Jesus utilized this to treat him as a peer and look for his input where appropriate; all while maintaining his positioning as the trainer. The time and techniques demonstrated for heat detection were as good as I have ever seen. I was impressed."

WHAT IS THE PURPOSE OF THE RMS TRAINING PROGRAM?

Trainees with at least one year of artificial insemination experience are welcome to the RMS Training Program to advance their heat detection, insemination and dairy reproduction management skill sets, while acquiring new proficiencies on reproductive structure recognition from an experienced and certified ultrasound and RMS technician. Additionally, trainees will learn from dairy industry professionals at the University of Idaho about all factors affecting reproduction performance in a fully customizable and hands-on setting.

GAIN CONFIDENCE THROUGH OUR EXPERTISE

The RMS Training Center is located in Twin Falls, Idaho at a state-of-the-art dairy comprised of both Holstein and Jersey cattle. In addition to breeding pens (cow freestalls and open lots) trainees will be exposed to variety of settings including the parlor, feed area, maternity, and transition cow facilities.

14,000+ cow freestall and open lot dairy
36.6 kg/day production
26% PR and **60% HDR**

Leading the program is Jesus Berumen, DVM who is a certified ultrasound technician and an experienced herdsman with multilingual coaching skills. On-farm training includes:

- Heat detection
- Chalking speed and thoroughness
- Mucus extraction
- Ovarian structure identification
- Gun preparation with speed and efficiency
- Use of records
- Advanced breeding technique emphasizing speed and cleanliness
- Breeding decision making
- Heifer lot AI
- Customer communication coaching and professionalism

University of Idaho Extension

We are proud to partner with the University of Idaho Extension to provide classroom and wet lab training conducted by a team of experts working in the 3rd ranked milk production state in the U.S.

- Reproductive physiology
- Heat expression and detection
- Synchronization programs
- Repro measurements
- Transition cow management
- Safety & biosecurity
- Cattle handling & stockmanship
- Cow comfort
- Heat stress management
- Full library of resources to access

Ismail Ilker Kocaer, graduate of the RMS Training Program in March of 2015 hailing from Turkey, noted that the program was perfect for technicians like him. "Jesus is a wonderful trainer and leads the best program I've ever attended."
